

Core Message

This is a simple, secure solution built in the BVI to solve a real everyday problem—blocked vehicles—while protecting privacy and improving communication.

This project represents how modern mobile systems and AI-driven thinking can be applied locally to improve daily life.

Problem

Blocked vehicles are a common issue across the BVI, especially in busy areas like Road Town, events, and ferry terminals.

Currently, there is no safe or efficient way to contact vehicle owners without confrontation or exposing personal information.

Solution

Yuh Blockin allows users to search a license plate and send a secure, anonymous message to the vehicle owner.

The owner receives a notification and can respond instantly through a private chat interface.

Key Features

- Anonymous messaging
- Fast license plate lookup
- Real-time chat
- Privacy-first design
- Built for local use

Demo Flow

1. Search license plate
2. Send message
3. Owner receives notification
4. Chat opens anonymously

Trust & Safety

No personal information is exposed. Built with moderation and safeguards.

Future Expansion

Delivery coordination, event communication, government messaging systems.

Closing Statement

We don't have to wait for outside solutions—we can build what we need right here. Yuh Blockin is just the starting point.
